

PIPELINE™

BOTTOMING-OUT KIT

Beer Line Cleaner + WOW-faktor 10

6.2 Kgs of concentrated cleaning power in one compact carton

Use with perfect confidence in all types of beverage dispense systems, e.g. cask, keg and tank beer, cider, wine, water, post-mix soft and fruit-juice dispense systems.

Almost certainly the best *conventional* beer line cleaner ever. PIPELINE BOTTOMING-OUT KIT represents the greatest technical advance in chemical dispense system hygiene in twenty five years.

Chlorine-free

No caustic soda

Of great benefit to PIPELINE and non-PIPELINE users alike; ensuring total hygiene for beverage dispense systems. Newcomers to PIPELINE or PIPELINE Auto are recommended initially to manually "bottom-out" their dispense systems with - yes, you've guessed it - PIPELINE BOTTOMING-OUT KIT; it is generally sold as part of the PIPELINE Starter Pack.

PIPELINE BOTTOMING-OUT KIT is sufficient to make up 50 litres of bottoming-out solution and is not restricted to PIPELINE users. Use to "bottom-out" old or neglected dispense systems or use once or twice a year to bring your dispense system back to scratch or to verify your existing cleaning techniques. Chlorine-free. Contains no caustic soda. A sensationally good and effective cleaner, softening, emulsifying and lifting deposits enabling total biofilm removal and dispense system sterilisation.

A dispense system does not have to be neglected or badly maintained to require bottoming out. Employing poorly performing chemical cleaners or unsophisticated and unmodified chlorinated caustic soda-based products or applying chemicals incorrectly can all lead to a build-up of stubborn and tenacious organic and inorganic biofilms, some of which can manifest themselves in obvious and visual form (above). These can be but the proverbial tip of the iceberg.

The Home of PIPELINE

Although **PIPELINE Gold** is the most sophisticated, the most advanced and the best Conventional Beer Line Cleaner there has ever been PIPELINE Bottoming-out Kit is even better! Containing no caustic soda and no chlorine, this product is well ahead of its time. We have incorporated some of the most technically advanced additives on the market - some of which have never yet been used for this application - to produce a product of stunning, yet safe and non-aggressive, cleaning power.

A very simple method - and very conventional.

Make up cleaning solution. Pull through to the head. Let stand for 10 minutes. Pull off 1 litre of cleaning fluid. Repeat this twice more. Rinse out with 12/15 litres of fresh water per line. Reconnect the beer.

Pull off until golden fluid emerges.

PIPELINE Gold is

Gold in Bars.

Pull off discoloured fluid until golden fluid emerges or simply pull off 1 litre of cleaning fluid.

Pull off 1 litre of cleaning fluid and examine for alien objects. (However, allow for the fact that the fluid is naturally cloudy.)

And here's the "Wow" factor; what bottoming-out is about. "What on Earth is that?" "Where did that lot come from?" And, "I thought my lines were clean! That's amazing!" etc. Floaters; very satisfying. PIPELINE BOTTOMING-OUT KIT is a remarkable product; but it is very satisfying - because it gives visible results; you know something well worth the money has happened.

As for the follow-up cleaning - your regular weekly or fortnightly line cleaning - well, the choice is yours. In the Chemisphere UK stable we have the widest possible choice of top-quality products, including PIPELINE AUTO, if you have been manually bottoming-out your automatically cleaned dispense system.
